SUMMARY

Dynamic and results-driven software engineer with over 4 years of experience in designing, developing, and delivering robust software solutions using Python, Java, JavaScript, and web technologies. Proficient in Agile methodologies, microservices, and cloud platforms (SAP BTP, AWS, GCP) with a strong focus on code quality, performance optimization, and cross-functional collaboration.

EDUCATION

Illinois Institute of Technology, Chicago, IL DEC 2024
Master of Science, Computer Science

Kurukshetra University, Kurukshetra MAY 2020
Bachelor of Technology, Computer Science and Engineering

SKILLS

- **TECHNOLOGY:** | Python | Java | JavaScript | NumPy | Pandas | Django Framework | Flask | SAP UI5 | SAP ABAP | SAP BTP Cloud | C/C++ | SQL | HTML5 | CSS | Docker | Google Cloud Platform (GCP) | Amazon Web Services (AWS) | Linux | GitHub | React | Angular | REST APIs | SQLite | OpenCV | Matplotlib | Microservices | NoSQL
- **CERTIFICATES:** | Harward CS50's Introduction to Artificial Intelligence with Python | Fundamentals of Machine Learning – Microsoft Learn | Microsoft Azure AI Fundamentals – Microsoft Learn | Fundamentals of Azure AI services – Microsoft Learn | SAP Cloud Platform Certificate - Udemy | SAP Analytics Cloud - Udemy | SAP Basis Admin – Udemy |
- **SECURITY & CYBERSECURITY:** | API Security (JWT, OAuth2) | Identity & Access Management (IAM) | AWS Security (IAM, API Gateway Authorizers, CloudWatch Monitoring) | Data Encryption (at-rest & in-transit) |
- **TRAININGS:** | Certified by DUCAT for proficiency in Java - 6 weeks | Completed Industrial Training in PYTHON at S O Infotech (P) LTD - 6 weeks | TCS Xplore program PYTHON - 6 months

WORK EXPERIENCE

Python Developer

Simba Cleaners LLC MAR 2025 - Current

- Migrated legacy .NET monolithic application to a Python (Flask/Django) microservices architecture, improving scalability and reducing maintenance costs by 25% annually.
- Designed and implemented RESTful APIs handling order management, billing, and customer notifications, reducing response times by 40%.
- Integrated the web application with store POS systems and automated invoice generation, boosting operational efficiency by 30%.
- Implemented unit and integration tests with PyTest and Postman, increasing release reliability and reducing production issues by 20%.
- Contributed to CI/CD pipelines using Git, GitHub Actions, and Docker, cutting deployment cycles from 2 weeks to 2 days.
- Collaborated with senior engineers and stakeholders in an Agile environment, participating in sprint planning, daily stand-ups, and code reviews.

PYTHON DEVELOPER / SAP Cloud Consultant

Tata Consultancy Services, Ahmedabad APR 2021 – DEC 2022

- Spearheaded the design, development, and maintenance of 15 PYTHON web applications by driving technical initiatives with Python, JavaScript, HTML5 and SAP UI5 deploying them on the SAP Cloud

Platform and integrating with ABAP objects, resulting in a 30% enhancement in functionality and efficiency across client business processes.

- Optimized cloud applications and workflows by proactively implementing Agile methodologies, enforcing stringent code quality standards, advanced performance optimizations, robust security measures, and accessibility enhancements, achieving a 30% boost in productivity metrics and improved user satisfaction levels.
- Diagnosed and resolved 10-20 daily technical issues in cloud applications through detailed debugging with PyCharm, Chrome DevTools, and SAP Web IDE, ensuring minimal downtime and sustained performance across complex, distributed systems.
- Collaborated extensively with global cross-functional teams, including Cloud app developers and CPI consultants, to provide technical consultancy, leveraging RESTful APIs, JSON, AJAX, and SOAP to address intricate challenges, while delivering comprehensive user training on SAP solutions, focusing on responsive design, intuitive interfaces, and optimized user experiences.
- Authored and maintained meticulous technical specifications and documentation adhering to web development standards, facilitating Agile development cycles, iterative improvements, and long-term scalability of deployed solutions.

PYTHON DEVELOPER TRAINEE

Tata Consultancy Services, Ahmedabad

NOV 2020 – MAR 2021

- Attained a solid foundation in Python through a 6-week Initial Learning Program (ILP) and passed the Elevate Wings 1 exam, showcasing proficiency in Python.
- Acquired expertise in SAP Cloud platform development, enhancing skills in cloud technologies, APIs, and database management under Agile methodologies.
- Gained expertise in SAP Cloud Apps development during a 3-month training program, with a focus on SAP UI5, JavaScript, and SQL for database management.
- Acquired knowledge in SAP Cloud platform development and administration, expanding your skill set in cloud technologies.

PROJECT EXPERIENCE

Intranet Mailing System

JUN 2018 – AUG 2018

- Developed a Java-based intranet mailing system for secure internal communication within an organization, integrating with MySQL for data storage and JavaScript for front-end enhancements.
- Implemented REST APIs for seamless data exchange, optimized performance on Linux, and conducted unit testing to ensure reliability, showcasing skills in Java, web development, and Agile practices.

Motion Detection and Recognition Software

JUN 2019 – AUG 2019

- Developed using Python and OpenCV, this software captures video feed from a computer's webcam and employs advanced algorithms to detect motion within the frame.
- The program logs essential information, including the start time, end time, and images of moving objects, and stores this data in a database.
- This project demonstrates my proficiency in computer vision and image processing and showcases my ability to create real-time solutions for visual data analysis.

College ERP System

AUG 2019 – MAR 2020

- Designed and implemented a comprehensive ERP system using Python and Django to manage and maintain vital student data.
- The system allows for efficient record-keeping of student information, including marks, attendance, fees, and college notices.
- Teachers and administrators can effortlessly maintain and update student data, and the platform provides secure access to students to view their information.
- This project underscores my skills in web development, database management, and the ability to create user-friendly solutions for educational institutions.

GitHub Data Visualization App

NOV 2023 – DEC 2023

- Developed and deployed a Flask app that fetches data from GitHub repositories using the GitHub API and creates graphs based on various metrics such as stars, forks, commits, and contributors.
- The app uses Matplotlib and Seaborn libraries to generate different types of graphs such as bar charts, pie charts, scatter plots, and histograms.
- The app sends the graphs as JSON objects to a React app that displays them in a responsive and interactive web interface.
- This project demonstrates my skills in data analysis, web development, and the ability to create visually appealing solutions for data-driven applications.

Secure Scheduled Messaging Platform

SEP 2023 – DEC 2023

- Built and deployed a secure message scheduling platform with payment integration and automated delivery workflows.
- Created AWS Lambda APIs in Python to store user messages, payment details, and recipient data in Amazon DynamoDB.
- Integrated PayPal and an in-app credit system with server-side validation on AWS Lambda.
- Secured APIs with JWT token authentication and AWS API Gateway authorizers for controlled access.
- Designed automated notifications and fallback delivery workflows using AWS CloudWatch Events and Lambda to trigger actions based on user inactivity or failed authentication.
- Secured APIs with JWT token authentication and AWS API Gateway authorizers for controlled access

Real-Time Tracking and Gamification Platform

JAN 2024 – PRESENT

- Designed and developed a cross-platform system to track and gamify user activity, featuring real-time location tracking, route recording, and leaderboard functionality.
- Architected and deployed AWS Lambda backend services integrated with Amazon API Gateway and DynamoDB for secure, scalable data storage and retrieval.
- Utilized AWS S3 for storing static map images and route snapshots, implementing optimized access patterns for reduced latency.
- Developed RESTful APIs in Python to process incoming route data, manage leaderboard rankings, and handle user profile updates.
- Implemented push notifications using AWS SNS and Firebase Cloud Messaging, with event-driven triggers from AWS Lambda.
- Implemented encryption and token-based authentication to secure user data and API transactions.
- Applied cold start optimization techniques and DynamoDB TTL for caching and performance improvements.

HONORS AND ACHIEVEMENTS

- Elevate Wings 1 exam - TCS

FEB 2021
